PROFESSIONAL SUMMARY

B.Tech Information Technology graduate with hands-on experience in **software development, backend systems, RESTful APIs, database solutions, testing, debugging, and system design**. Experienced in understanding functional requirements, translating business needs into technical solutions, developing modular software components, validating system workflows, and collaborating with cross-functional teams. Strong foundation in **SDLC, software engineering, Java, Spring Boot, JavaScript, Node.js, SQL, MongoDB, Docker, Git, and system design**. Also possess prior industrial exposure to **automotive mould manufacturing, CPS sensor workflow, mould maintenance, and production processes**. Interested in **automotive software, ADAS, sensor-based systems, reusable software platforms, and technology development**.

TECHNICAL SKILLS

Programming: Java, JavaScript (ES6+), SQL, Python

Software & System Development: SDLC, System Design, Requirement Analysis, System Workflows, RESTful APIs, Modular Software Development, CRUD Operations

Backend: Node.js, Express.js, Spring Boot, Hibernate

Frontend: React.js, HTML5, CSS3, Bootstrap

Databases: MySQL, MongoDB, Stored Procedures

ADAS / Computer Vision: OpenCV, YOLO, YOLOv8, Lane Detection, Vehicle Detection, Object Tracking, Depth Estimation

Testing & Quality: Manual Testing, API Testing (Postman), Debugging, Functional Validation

DevOps & Tools: Git, GitHub, Docker, Docker Compose

Industrial / Automotive Exposure: Mould Maintenance, CPS Sensor Workflow, Mould Manufacturing Process

EXPERIENCE

MERN Full Stack Developer | Mojija Ecommerce Pvt. Ltd., Greater Noida, Uttar Pradesh | 1 July 2025 – 30 June 2026

- Analyzed functional requirements and translated business needs into software features, system workflows, and technical solutions.
- Developed scalable software applications and RESTful APIs using MongoDB, Express.js, React.js, and Node.js.
- Developed Java backend services using Spring Boot and Hibernate with MySQL, including queries, stored procedures, CRUD operations, and business logic.
- Applied system design principles to structure application modules, API workflows, database interactions, and reusable software components.
- Performed API testing, debugging, functional validation, and issue analysis to improve software reliability and performance.
- Collaborated with cross-functional team members to understand requirements, resolve technical issues, and support software implementation.
- Used Git/GitHub, Docker, and Docker Compose for source-code management, containerization, and consistent development environments.

Industrial Trainee | SMIEL, Motherson | June 2021 – January 2022

- Gained industrial exposure to automotive component manufacturing, mould maintenance, and production workflows.
- Studied and observed CPS sensor workflow and its role within automotive component processes.
- Worked with teams to understand mould making, maintenance activities, production stages, and quality-oriented manufacturing practices.

- Developed practical understanding of industrial processes, component design considerations, workflow coordination, and shop-floor operations.

EDUCATION

Galgotias College of Engineering and Technology, Greater Noida, Uttar Pradesh, India — B.Tech in Information Technology | 2025 | CGPA: 7.2

Central Institute of Petrochemicals Engineering & Technology (CIPET) — Diploma | 2018 – 2021 | 74%

PROJECTS

Vision-Based ADAS – FCWS, LDWS & LKAS | Python, OpenCV, YOLO, ONNX/TensorRT

- Developed a vision-based ADAS prototype supporting Forward Collision Warning, Lane Departure Warning, and Lane Keeping Assistance. Implemented vehicle detection, lane detection, object tracking, and optimized inference for road-scene perception.

ADAS Perception & Distance Estimation Pipeline | Python, PyTorch, YOLOv8, OpenCV

- Built an ADAS perception pipeline combining object detection, lane detection, monocular depth estimation, and bird's-eye-view projection. Structured perception components for modular processing and validation.

Employee Management System | React.js, Node.js, Express.js, MySQL, Docker

- Built a full-stack management system with secure authentication, CRUD operations, role-based access control, RESTful APIs, and Docker/Docker Compose deployment.

Attendance Management System | React.js, Node.js, Express.js, MongoDB

- Developed a full-stack attendance system with role-based authentication, attendance tracking, user management, RESTful APIs, CRUD operations, and MongoDB integration.

RELEVANT COURSEWORK

DBMS • Computer Networks • Software Engineering • Data Analytics

ACHIEVEMENT

- Completed the **MERN Stack Development Course** under the **Wipro Digital Skills Readiness Program** (May 2024 – September 2024), gaining hands-on experience in full-stack application development and industry-oriented workflows.
